

Roger Helping to hear in noise and over distance

Bridging the understanding gap

For young listeners to engage in meaningful verbal communication, they must be able to clearly hear and understand the voice of the speaker. For children with hearing difficulties this can be a real challenge - especially in difficult listening situations like noisy rooms and over distance. Even when they are wearing the very latest hearing technology.

It's a challenge that calls for some intelligent help.

Introducing Roger

Roger by Phonak is the new digital standard that bridges the understanding gap. It uses a cutting-edge wireless microphone to pick up the voice of the speaker, before transmitting it wirelessly - via miniature receivers - into a child's hearing aids or cochlear implants (CIs).

The result is an entirely new and scientifically proven level of speech clarity for the child. The kind of performance that, in the past, children with hearing loss and their parents could only dream of.

No matter which hearing aids or cochlear implants a child wears, Roger can help them to hear and understand.

A Roger system to suit you

With Roger there is a wireless microphone to suit every listener. From the discreet premium-performance Roger Pen to the advanced Roger Clip-On Mic – with Roger there's no reason why every child or teenager cannot join the revolution.

Roger Pen

The inconspicuous Roger Pen with fully automated multiple microphone settings and Bluetooth connectivity enables you to hear and understand in loud noise and over distance.

It can be used as a standalone microphone or alongside other Roger Clip-On Mics or additional Roger Pens.

Plus it features wideband audio Bluetooth for mobile phone calling, an audio input for listening to your iPod or other multimedia devices and TV connectivity.

See our situational guide for more advice.

Roger Clip-On Mic

The Roger Clip-on Mic is an easy-to-use wireless microphone that offers one-click connection to Roger receivers for one-to-one communication in loud noise and over distance.

This compact microphone packs industry-leading Roger speech-in-noise performance into a discreet, small device. It can be used as a standalone microphone or alongside other Roger Clip-On Mics or the Roger Pen to allow communication between multiple speakers.

It also includes an audio input for listening to multimedia and TV connectivity.

See our situational guide for more advice.

A Roger system for every situation...

In a buggy

It is difficult to understand speech when it comes from a direction other than that you're facing. For a child sitting in a buggy, this is definitely the case. A Roger system overcomes all of these issues, bringing the parent or caregiver's voice directly into the child's ears.

Playing sports

Children with hearing loss find it easier to respond to a coach's instructions when they can hear these commands directly – wherever they are on the field of play and whatever the level of surrounding noise. This way, instead of missing out on useful advice, they can listen, improve and get in the game.

At the park

Outdoor spaces such as parks and playgrounds often present all of the listening challenges that children with a hearing loss face – there is surrounding noise, distance and speech-reading is virtually impossible due to children constantly moving around.

During group activities

Group activities and meal times pose a real challenge for children who have hearing difficulties, due to the complex mix of chatter, background noise and clinking cutlery. A Roger wireless microphone system effectively cuts out this distracting noise, helping a child hear and respond more easily.

Where there are multiple speakers
 Following the words of one person is difficult enough, but if another starts talking too, speech understanding becomes even trickier. Roger microphones, however, can be easily joined together in a small network. This allows a young listener to accurately hear what everyone has to say, without the speakers having to share a single microphone.

On the phone
 Phone calls can be a struggle for children with a hearing loss, which is both frustrating and can separate them from their peers. Certain Roger products have features built-in for effective one-touch mobile phone calling - ensuring everyone can keep their social life right on track.

In the car
 Car journeys are one of the most difficult listening situations for hearing-impaired children due to the constant loud hum of engine and road noise. Roger technology's direct-to-the-ear approach enables a child to better hear and respond to his or her parents' voices.

Enjoying multimedia
 Wireless Roger microphones connect to any multimedia device's audio-out jack - enabling a youngster to hear their favourite songs, movies, video games and educational software clearly in their ears. And all without needing to crank up the volume!
